

IS CLINICAL PEEL/FACIAL

This is an anti-aging, gently resurfacing and cellular renewal treatment for all skin types.

All the products used during this treatment have a low ph, which is essential in achieving perfect skin penetration, stimulating cell renewal as well as activating collagen production.

What can you expect?

- Improved skin texture
- Improvement of skin colour
- Rehydration of the skin
- Clearing blackheads, spots and minimizing pores
- Increased natural skin glow and radiance
- Provides a “no-downtime” treatment
- Produces noticeable results

Risks:

Initially your skin may be somewhat red and puffy. It may take up to one week for the renewal and rebuilding process to allow your skin appearance to return to “normal”. During this repair period some patients can experience slight stinging, burning, tightness, sun sensitivity and peeling of the superficial layers of skin.

There can be some crusting and this should be allowed to heal naturally.

You may experience a Glycolic sensitivity (mild discomfort and red bumps that can last for 48 hours)

Book a complementary skin consultation with our skin therapist. She will go through all your unanswered questions.
